Bengal Bay Garnet is our premium almandine garnet abrasive, nature's best garnet for waterjet cutting. It is engineered for performance with high purity, exceptional processing and tight grading. This garnet is the trusted choice when you need an all-around superior cut.

Modern processing methods are responsible for our renowned performance. Each particle flows through an exclusive CleanWash™ Purifying Process where solids and fines are meticulously removed. With the lowest count of suspended solids, you can cut faster with problem free operation. This process, combined with inline quality control means every bag of Bengal Bay Garnet you open is the same high quality abrasive you come to expect.

We offer Bengal Bay Garnet in two distinct precision grades in both 55 lb bags and 2,200 lb sacks.

**BENGAL BAY 80**
Our most popular selection. Used for all applications, thick thin or difficult materials when performance matters.

**BENGAL BAY 120**
Optimal for thin and brittle materials, where performance and precision finishes are needed.

Enhance the capabilities of your waterjet with the right cutting fuel.
About Shape Mined Materials

At Shape Mined Materials we engineer garnet specifically for the waterjet process. This dedication ensures you get the most out of your system, while producing the best cut parts.

How? Unmatched waterjet technology and garnet expertise combined. Not only are we the leading global supplier of garnet, but we are also made up of world leading OEM waterjet manufacturers. This rare synthesis creates garnet solutions intimately focused on improving customer productivity and waterjet capabilities, as well as reliable global distribution.

MicroMedia Garnet is our highest precision garnet, used in specialty micro-cutting applications where exacting tolerances and smooth finishes are required. Specifically designed for very thin kerf cutting using extra small nozzle IDs, MicroMedia Garnet offers next level precision cutting. While this abrasive is especially effective for cutting thin glass and laminates, it’s the ideal solution for cutting any thin material.

Ecojet Garnet is an economical alternative when less challenging cutting is required. This brand is well suited for cutting applications where smaller orifice and nozzle combinations are used and when part tolerances are not as critical. Manufactured to high quality standards, Ecojet Garnet is a value focused abrasive for use in straightforward cutting applications.

ECOJET 80
Optimal for less demanding applications where economy is important.
